

MP24TP6 Mini6™

Mini6™ Category 6 Through Coupler Panel

Performance without Compromise

The Mini6™ Category 6 24 port through coupler panel features built in recessed label strip with a protective clear plastic cover and a clip on rear cable management strain relief bar.

Each Tray features a clip on cable management bar.

The couplers exceed the requirements of the TIA/EIA 568B category 6 specification and can be used for all protocols covered within the Category 6 standards.

Each panel is pre-assembled, with the Category 6 RJ45 couplers mounted in a flush fit plastic front skin, which is then fitted into a metal panel for extra rigidity.
